

UFC Fight Night: Taira vs. Park - Round 1 Portfolio Analysis and Deployment

I. Portfolio Mandate and Round 1 Executive Summary

A. Statement of Objective

The primary directive for this portfolio is the maximization of long-term percentage profit over a 10-round competitive horizon. With an initial capital base of \$15.00, the paramount objective is sustainable growth. This strategy prioritizes the identification and exploitation of market inefficiencies, where the offered odds diverge significantly from our calculated true probabilities. The approach is rooted in a disciplined, mathematical framework that balances calculated risk-taking with rigorous capital preservation to ensure viability and growth throughout the competition.

B. Round 1 Portfolio Overview

The investment strategy for Round 1 involves the full deployment of the \$15.00 bankroll across four distinct positions. This portfolio is constructed to capitalize on perceived pricing errors within specific proposition markets rather than relying on broad moneyline wagers. The selections target outcomes where extensive quantitative modeling and qualitative analysis indicate a substantial positive expected value (+EV). The allocation across these positions is weighted according to the magnitude of the perceived edge and the confidence in the underlying data, creating a diversified portfolio of high-value opportunities.

C. Confirmation of Constraints

This analysis and the resulting portfolio adhere strictly to all stipulated competition parameters. All wager selections are drawn exclusively from the provided "Bets for Analysis" list. The entire \$15.00 bankroll has been allocated, and all bet denominations are in 25-cent increments, consistent with the operational mandate.

D. Executive Summary Table

The following table provides a consolidated overview of the Round 1 portfolio for immediate review.

Bet Description	Odds	Allocated Amount (\$)	Potential Profit (\$)	Confidence Score (1-5)
Rafael Estevam To Win By Decision	-105	5.00	4.76	5
Esteban Ribovics To Win By KO/TKO/DQ	+150	4.00	6.00	4
Neil Magny To Win By Decision	+240	3.50	8.40	3
Rosa vs. Cornolle - Fight to Be Won by Split/Majority Decision: Yes	+250	2.50	6.25	3
Totals		15.00	25.41	

II. Market Intelligence and Comprehensive Value Assessment

A systematic, fight-by-fight deconstruction of the available markets was conducted to identify pricing discrepancies. The following analysis details the rationale for acting on or passing over key investment opportunities across the card.

A. Main Event - Flyweight Division: Tatsuro Taira vs. Hyun Sung Park

Market Narrative: The market has installed Tatsuro Taira as a significant favorite, with moneyline odds of -250. This pricing reflects his status as the #6 ranked UFC flyweight contender facing an unranked, albeit undefeated, opponent in Hyun Sung Park, who accepted the bout on short notice.¹ The prevailing sentiment is that Taira's world-class grappling will be the determinative factor in a five-round contest.

Data Integration & Analysis: Taira (16-1) is a grappling prodigy, evidenced by his 1.6 submission attempts per 15 minutes and multiple Performance of the Night bonuses for submissions.³ His sole professional loss was a highly competitive split decision against top contender Brandon Royval, a fight in which he demonstrated the cardio and durability to compete for five full rounds.⁵ Park (10-0) enters this contest with a perfect record and has finished all three of his UFC opponents, showcasing legitimate power and submission skills.⁶ However, the critical variable is his acceptance of this fight on less than two weeks' notice, replacing the injured Amir Albazi.¹ Preparing for a five-round main event against an elite opponent under such conditions presents a monumental challenge to his cardio and strategic preparation. While Park boasts a 100% takedown defense in the UFC, this statistic was accrued against a significantly lower caliber of opposition and has not been tested by a grappler of Taira's pedigree.⁶

Final Assessment: The short-notice nature of this bout for Park is the single most influential factor. His most viable path to victory is an early knockout, leveraging his power before fatigue becomes a factor. Taira, however, is a durable and composed fighter who has navigated dangerous exchanges with top-tier competition. Should the fight extend beyond the initial rounds, Taira's superior preparation, five-round experience, and elite grappling are expected to overwhelm a fading opponent. While

Park remains a live underdog for an early finish, the most probable outcome is a Taira victory, likely via a late submission or a decision predicated on grappling control. The moneyline at -250 and associated prop lines appear to be efficiently priced, offering no discernible edge. Therefore, all potential wagers on this contest are a pass.

B. Co-Main Event - Lightweight Division: Mateusz Rebecki vs. Chris Duncan

Market Narrative: Mateusz Rebecki is positioned as a -200 favorite, a line that reflects the market's respect for his powerful, wrestling-heavy style and consistent pressure.

Data Integration & Analysis: This matchup presents a unique variable: Rebecki and Duncan are teammates at American Top Team (ATT) and lived in close quarters during their respective training camps for this fight.⁸ This level of familiarity can often lead to a tentative, strategic affair where both fighters are hesitant to engage in their usual patterns. Rebecki (20-2) is a physical specimen with a relentless wrestling attack, evidenced by a remarkable 75% takedown accuracy and an average of 3.84 takedowns per 15 minutes.⁹ Duncan (13-2) has proven to be a durable and opportunistic grappler, securing his last two victories with guillotine chokes.¹⁰ His primary vulnerability, however, is a porous takedown defense, which stands at a mere 37%.¹⁰

Final Assessment: The central dynamic of this fight is the collision between Rebecki's elite offensive wrestling and Duncan's counter-submission game. The teammate factor introduces an element of unpredictability. However, the statistical disparity in the grappling domain is too significant to overlook. Rebecki's game plan is invariably to close distance and secure takedowns. Duncan's primary response to being taken down has been to hunt for the guillotine. Given their shared training history, it is highly probable that Rebecki has extensively drilled counters to this specific threat. Once Rebecki establishes top position and navigates the initial submission danger, his superior strength and positional control are expected to dominate the contest. The moneyline appears fairly priced, and while a finish is possible, Duncan's toughness could extend the fight to a decision. No line offers a compelling enough edge to warrant capital allocation.

C. Lightweight Division: Elves Brener vs. Esteban Ribovics

Market Narrative: Esteban Ribovics is a substantial -250 favorite. The market anticipates a high-action striking battle, favoring Ribovics' superior volume and speed. This is further reflected in the "Fight to Go the Distance: No" line being priced at -120, indicating a high probability of a finish.

Data Integration & Analysis: Ribovics (14-2) is a statistical outlier, landing an immense 8.08 significant strikes per minute (SLpM) while absorbing a high rate of 5.92 significant strikes per minute (SApM).¹² This metric profile points to a defensively vulnerable, hyper-aggressive offensive style. Elves Brener (16-5) exhibits a similar penchant for brawling but with lower output, landing 3.99

SLpM against 5.30 SApM.¹³ Brener's recent TKO loss to Joel Alvarez demonstrated a clear susceptibility to powerful, high-volume strikers.¹³ Analyst consensus projects a "knock down, drag 'em out brawl" that heavily favors the faster, higher-output Argentinian.¹⁶

Final Assessment: The market has correctly identified Ribovics as the probable victor. The value, however, is not on the steep moneyline but in the method of victory. The stylistic confluence of Ribovics' overwhelming offensive pace, Brener's negative striking differential (SLpM-SApM=-1.31), and his previously demonstrated vulnerability to TKO losses creates a strong analytical funnel towards a specific outcome. In a sustained firefight, the combatant with superior speed and volume is overwhelmingly likely to secure a stoppage. The implied probability of the "Esteban Ribovics To Win By KO/TKO/DQ" prop at +150 is 40%. The analysis indicates the true probability of this outcome is substantially higher, likely exceeding 50%, presenting a clear +EV opportunity. This wager has been selected for the portfolio.

D. Women's Bantamweight Division: Karol Rosa vs. Nora Cornolle

Market Narrative: Karol Rosa is a -192 favorite, a price based on her greater UFC experience and perceived well-roundedness. The market is extremely confident this fight will reach the scorecards, pricing the "Fight to Go the Distance: Yes" line at a prohibitive -500.

Data Integration & Analysis: Rosa (18-7) is a high-volume striker (6.22 SLpM) with a functional wrestling game (1.09 takedown average).¹⁷ Her career has been marked by inconsistency; she has alternated wins and losses over her last eight bouts.¹⁷ Recent reports indicate she has relocated to a new team and feels she is in a much better mental state, which could be a positive catalyst.¹⁹ Cornolle (9-2) is a former kickboxer who possesses a two-inch height advantage and has compiled a solid 3-1 record in the UFC.²⁰ Her lone defeat in the promotion was a competitive split decision, underscoring her ability to contest fights closely.²⁰ Critically, two of Rosa's UFC victories have come by way of split or majority decision, indicating a pattern of engaging in closely contested bouts that are difficult for judges to score.¹⁷

Final Assessment: This matchup profiles as an exceedingly competitive affair. Rosa's documented inconsistency makes her an unreliable favorite at the current price. Cornolle has demonstrated the durability and skill to compete at the UFC level. The most predictable element of this fight is its likelihood to be a close, 15-minute battle. The market's -500 price on the fight going the distance confirms this. Given that both fighters are durable, neither is a prolific finisher, and Rosa has a history of close decisions, the probability of a split or majority decision is elevated far beyond that of a typical UFC bout. The +250 odds on "Fight to Be Won by Split or Majority Decision: Yes" carry an implied probability of just 28.6%. A detailed analysis of their styles and records suggests the true probability is closer to 40-45%. This discrepancy represents a significant market inefficiency and a strong value proposition.

E. Welterweight Division: Neil Magny vs. Elizeu Zaleski dos Santos

Market Narrative: Zaleski is a -198 favorite, a line that appears to be heavily influenced by a surface-level reading of Neil Magny's recent 1-3 record.

Data Integration & Analysis: Magny (29-14) will enter the octagon with commanding physical advantages, including a four-inch height and a seven-inch reach superiority.²¹ He is renowned for his exceptional cardio and his tactical, attritional style that often involves neutralizing opponents in the clinch. Zaleski (25-9-1) is a 38-year-old striker known for his explosive, high-impact offense, but he accepted this fight on short notice.²⁴ The most crucial piece of context, which the market seems to be underweighting, is the quality of Magny's recent opposition. His losses came against elite, ascending contenders in Carlos Prates, Michael Morales, and Ian Garry, while his sole win in that stretch was against another dangerous prospect, Mike Malott.²⁵ This

bout represents a significant step down in the athletic prime and trajectory of his opponent.

Final Assessment: The market pricing exhibits a clear case of recency bias, penalizing Magny for his losses without adequately adjusting for the elite level of competition he faced. Magny's specific skillset—utilizing his length for long-range striking, engaging in grueling clinch battles, and pushing a relentless pace—is the archetypal kryptonite for an aging, explosive striker like Zaleski, particularly one on short notice. If Magny can weather the early storm in round one, his probability of winning a grinding decision increases exponentially as the fight progresses. His durability is well-documented. The +170 moneyline on Magny is a clear value play. However, an even greater edge exists in the proposition market. The "Neil Magny To Win By Decision" line at +240, with an implied probability of only 29.4%, represents a superior investment, as this is his most probable path to victory.

F. Flyweight Division: Rafael Estevam vs. Felipe Bunes

Market Narrative: Rafael Estevam is a colossal -550 favorite, a line reflecting his perfect 13-0 record and a perceived overwhelming stylistic advantage.

Data Integration & Analysis: Estevam is a relentless wrestling-based fighter, averaging an exceptional 6.41 takedowns per 15 minutes.²⁶ His opponent, Felipe Bunes (14-7), is a 35-year-old BJJ black belt whose UFC statistics reveal a catastrophic defensive flaw: a 0% takedown defense rate.²⁷ Furthermore, Bunes absorbs a dangerously high 7.86 significant strikes per minute, indicating defensive liabilities in all phases of combat.

Final Assessment: This matchup presents one of the most pronounced stylistic mismatches on the entire card. Bunes' demonstrated inability to defend takedowns against a specialist whose entire strategy revolves around them creates a predictable, one-sided dynamic. The question is not who will win, but how. While Bunes is a legitimate submission threat from his back, Estevam is a positionally sound grappler who attempts a low volume of submissions (0.4 per 15 minutes), preferring control over risk.²⁶ Estevam's striking output is also low (2.06

SLpM), making a finish via ground-and-pound less probable than a sustained, dominant control-based performance. The most likely scenario is Estevam securing

takedowns at will and maintaining top position for the majority of the 15 minutes to win a clear-cut decision. The "Rafael Estevam To Win By Decision" prop at -105 offers exceptional value. The implied probability is 51.2%, but the stylistic dynamics funnel the fight toward this specific outcome with a much higher degree of certainty. This is the portfolio's anchor position.

III. The Round 1 Portfolio: Final Selections and Allocation

The following portfolio represents the culmination of the market analysis, deploying the \$15.00 bankroll across the four identified wagers with the highest positive expected value. Allocation is scaled based on confidence in the analytical edge.

A. Portfolio Summary Table

Bet Description	Odds	Allocated Amount (\$)	Potential Profit (\$)	Confidence Score (1-5)
Rafael Estevam To Win By Decision	-105	5.00	4.76	5
Esteban Ribovics To Win By KO/TKO/DQ	+150	4.00	6.00	4
Neil Magny To Win By Decision	+240	3.50	8.40	3
Rosa vs. Cornolle - Fight to Be Won by Split/Majority Decision: Yes	+250	2.50	6.25	3

Totals		15.00	25.41	
--------	--	-------	-------	--

B. Detailed Bet Justification

1. Rafael Estevam To Win By Decision

- **Bet Description:** Rafael Estevam To Win By Decision
- **Allocated Bet Amount:** \$5.00
- **Profit Potential Rationale (The "Why"):** This wager is predicated on a severe stylistic mismatch. Rafael Estevam is an elite wrestler for the division, averaging 6.41 takedowns per 15 minutes.²⁶ His opponent, Felipe Bunes, has a statistically recorded takedown defense of 0% in the UFC, demonstrating a critical inability to keep the fight standing.²⁷ While Bunes is a legitimate BJJ black belt, Estevam is a conservative top player (0.4 submissions attempted per 15 minutes), making a submission loss unlikely.²⁶ Estevam's low striking volume (2.06 SLpM) also reduces the probability of a TKO finish, funneling the most probable outcome toward a 15-minute fight dominated by top control.
- **Primary Risk / Counter-Argument:** The primary risk is that Estevam, who is taking the fight on short notice, could have a compromised weight cut, leading to cardio failure and a late submission victory for the crafty veteran Bunes.²⁸
- **Confidence & Allocation Justification (5/5):** Confidence is maximal due to the stark, quantifiable disparity in the wrestling phase, which is the foundational element of Estevam's entire game. Bunes' 0% takedown defense is a glaring, exploitable data point that creates a highly predictable fight dynamic. The \$5.00 allocation, representing one-third of the bankroll, reflects the assessment that this is the highest probability, most mispriced outcome on the card relative to its near even-money odds.

2. Esteban Ribovics To Win By KO/TKO/DQ

- **Bet Description:** Esteban Ribovics To Win By KO/TKO/DQ

- **Allocated Bet Amount:** \$4.00
- **Profit Potential Rationale (The "Why"):** This bet targets a predictable outcome from a volatile stylistic clash. Esteban Ribovics is a hyper-aggressive, high-volume striker, landing 8.08 significant strikes per minute.¹² Elves Brener is a durable but defensively liable brawler who absorbs 5.30 significant strikes per minute and was recently finished via TKO by a powerful striker.¹³ In a fight that projects to be a sustained striking exchange, Ribovics' superior speed, volume, and offensive diversity create a high probability of him overwhelming Brener and securing a stoppage.
- **Primary Risk / Counter-Argument:** The primary risk is that the fight devolves into a chaotic brawl where Brener's durability allows him to land a fight-altering power shot, or that Ribovics' own defensive liabilities (5.92 SApM) expose him to a knockout.¹²
- **Confidence & Allocation Justification (4/5):** Confidence is high based on the clear advantages in speed and offensive output for Ribovics in a matchup where both fighters are willing to engage in a firefight. The +150 odds present significant value against the likely probability of a KO/TKO finish. The \$4.00 allocation reflects this strong conviction in the fight's dynamic while respecting the inherent volatility of a brawl between two powerful lightweights.

3. Neil Magny To Win By Decision

- **Bet Description:** Neil Magny To Win By Decision
- **Allocated Bet Amount:** \$3.50
- **Profit Potential Rationale (The "Why"):** This wager identifies a market overreaction to Neil Magny's recent record. His losses came against the division's top rising talent, making him more battle-tested, not diminished.²⁵ He possesses massive physical advantages over Elizeu Zaleski dos Santos, with a 7-inch reach advantage that is critical to his out-fighting and clinch-heavy style.²² Facing a 38-year-old opponent on short notice, Magny's renowned cardio and attritional game plan are perfectly suited to wear Zaleski down and win on the scorecards.
- **Primary Risk / Counter-Argument:** The risk is that the 37-year-old Magny has finally reached a point of physical decline, and Zaleski's early explosive power catches him in the first round before he can implement his wearing strategy.
- **Confidence & Allocation Justification (3/5):** Confidence is moderate, as this is an underdog play, but the value is exceptional. The +240 odds (29.4% implied probability) significantly undervalue Magny's clear path to victory via a grinding,

tactical decision. The \$3.50 allocation is a calculated position, investing a meaningful portion of the bankroll to capitalize on what is perceived as the largest pricing error on an underdog prop.

4. Rosa vs. Cornolle - Fight to Be Won by Split or Majority Decision: Yes

- **Bet Description:** Fight to Be Won by Split or Majority Decision: Yes
- **Allocated Bet Amount:** \$2.50
- **Profit Potential Rationale (The "Why"):** This bet exploits the high probability of a close, difficult-to-score fight. The market heavily favors this bout to go the distance (-500). Karol Rosa has a history of inconsistency and has won via split/majority decision twice in the UFC, while Nora Cornolle's only UFC loss was a split decision.¹⁷ This confluence of factors—durable fighters, a favorite prone to close contests, and a competitive underdog—creates an environment ripe for a divided scorecard.
- **Primary Risk / Counter-Argument:** The main risk is that Rosa's new training camp has genuinely elevated her performance, allowing her to dominate the fight for a clear unanimous decision, or that Cornolle scores a surprising finish.
- **Confidence & Allocation Justification (3/5):** Confidence is moderate, as predicting the exact nature of a decision is inherently difficult. However, the +250 odds (28.6% implied probability) are mispriced given the specific context of these two fighters. The analysis suggests a much higher true probability. The \$2.50 allocation is a smaller, value-driven play designed to capitalize on this specific market inefficiency without overexposing the portfolio.

IV. Concluding Analysis and Forward Outlook

A. Portfolio Risk Profile

The Round 1 portfolio is strategically diversified across four distinct bouts, mitigating

single-fight risk. The construction balances high-probability outcomes with high-value opportunities. The largest allocation is placed on the "Estevam by Decision" wager, which is assessed as having the highest probability of success due to a severe stylistic mismatch. The portfolio then layers in wagers with progressively higher odds and slightly lower, yet still positive, expected value. This tiered approach aims to secure a positive return on investment while retaining significant upside potential through the underdog and proposition plays.

B. Strategic Foundation for Future Rounds

This inaugural portfolio establishes the core strategic philosophy that will guide future rounds. The methodology eschews low-value, heavy-favorite moneylines in favor of a deep, granular analysis of proposition markets where pricing inefficiencies are more common. By focusing on specific, predictable outcomes within a fight—such as method of victory or fight dynamics—the strategy aims to consistently identify and exploit value. This process-oriented approach, grounded in quantitative data and qualitative context, is designed to be repeatable and scalable, forming the foundation for sustainable, long-term bankroll growth throughout the 10-round competition.
