

Round 1 Portfolio Analysis: A Quantitative Approach to Value Identification in Professional Boxing Markets

Executive Summary and Mandate Adherence

This document presents a comprehensive analytical breakdown and investment portfolio for Round 1 of a 10-round boxing betting experiment. The analysis operates under the core mission of maximizing long-term percentage profit from a starting bankroll of \$5.00. The foundational strategy is the systematic identification and exploitation of Positive Expected Value (+EV) opportunities, prioritizing sustainable growth and capital preservation.

Constraint Confirmation: This analysis acknowledges and confirms its strict adherence to the hard constraint of utilizing only the betting lines provided in the "Bets for Analysis" list. All research, modeling, and final bet selections are drawn exclusively from this list. The entire \$5.00 bankroll will be allocated across the selected wagers in 25-cent increments, with the allocation size for each bet serving as a direct reflection of the quantitatively derived confidence in its edge.

The methodology employed herein is unemotional and mathematical, moving from objective market price deconstruction to proprietary probability modeling, edge calculation, and final portfolio construction.

Section 1: Market Deconstruction and Probabilistic Baselines

1.1 Introduction to Implied Probability as a Core Analytical Tool

Before any qualitative or stylistic analysis can commence, it is imperative to establish an objective, mathematical baseline for the market's valuation of each potential outcome. This is achieved by converting the provided American odds into their implied probabilities. This percentage represents the breakeven point for a given wager—the probability at which a bet is neither profitable nor unprofitable in the long run. The entire objective of a +EV strategy is to identify wagers where the analyst's assessment of the "true" probability of an outcome exceeds this market-implied figure.

The formulas for this conversion are as follows:

- For Negative Odds (Favorites): $\text{Implied Probability} = \frac{100}{|\text{Odds}| + 100}$
- For Positive Odds (Underdogs): $\text{Implied Probability} = \frac{100}{\text{Odds} + 100}$

Understanding this price is the non-negotiable first step; one cannot determine if a price is favorable without first knowing what it is.

1.2 Kenshiro Teraji vs. Ricardo Sandoval: Market Pricing Analysis

The available markets for the unified flyweight championship bout are deconstructed as follows:

- **Moneyline:**
 - Kenshiro Teraji (-425): Implied Probability = 80.95%
 - Ricardo Sandoval (+300): Implied Probability = 25.00%
- **Total Rounds:**
 - Over 10.5 (-165): Implied Probability = 62.26%
 - Under 10.5 (+120): Implied Probability = 45.45%
- **To Go The Distance:**
 - Yes (-145): Implied Probability = 59.18%
 - No (+105): Implied Probability = 48.78%
- **Winning Method:**
 - Kenshiro Teraji by KO/TKO/DQ (+140): Implied Probability = 41.67%
 - Kenshiro Teraji by Decision (+110): Implied Probability = 47.62%
 - Draw (+1600): Implied Probability = 5.88%
 - Ricardo Sandoval by KO/TKO/DQ (+800): Implied Probability = 11.11%
 - Ricardo Sandoval by Decision (+800): Implied Probability = 11.11%

- **Round Group Betting:**

- Teraji To Win In Rds 1-3 (+1400): Implied Probability = 6.67%
- Teraji To Win In Rds 4-6 (+700): Implied Probability = 12.50%
- Teraji To Win In Rds 7-9 (+500): Implied Probability = 16.67%
- Teraji To Win In Rds 10-12 (+550): Implied Probability = 15.38%
- Sandoval To Win In Rds 1-3 (+5000): Implied Probability = 1.96%
- Sandoval To Win In Rds 4-6 (+2500): Implied Probability = 3.85%
- Sandoval To Win In Rds 7-9 (+2200): Implied Probability = 4.35%
- Sandoval To Win In Rds 10-12 (+3000): Implied Probability = 3.23%

1.3 Oscar Duarte vs. Kenneth Sims Jr.: Market Pricing Analysis

The moneyline market for the super lightweight contender bout is deconstructed as follows:

- **Moneyline:**

- Oscar Duarte (-155): Implied Probability = 60.78%
- Kenneth Sims Jr. (+120): Implied Probability = 45.45%

1.4 Initial Market Observations and Emerging Themes

The raw implied probabilities reveal several key market narratives. For the Teraji vs. Sandoval bout, the market has priced Teraji as a dominant champion, affording him an implied win probability of over 80%.¹ This heavy favoritism establishes a very high threshold for finding value on his direct moneyline and suggests that profitable opportunities are more likely to exist in the prop markets or on the underdog side.

A significant analytical focal point emerges from an apparent contradiction within the props. The market heavily favors the fight to proceed into the later rounds, pricing the "Over 10.5" outcome at a 62.26% implied probability. Simultaneously, the "To Go The Distance: No" prop is priced at +105, implying a 48.78% chance—nearly a coin flip—that the fight ends via stoppage. When synthesized, these two data points do not contradict but rather create a specific narrative: the market anticipates a high probability of a *late-round stoppage*. This aligns perfectly with Teraji's recent championship performances, including a dramatic 12th-round TKO victory over Seigo

Yuri Akui and an 11th-round TKO of Cristofer Rosales.² This observation immediately directs analytical attention toward the "Winning Method" and "Total Rounds" markets as potential sources of value.

1.5 Table 1: Comprehensive Market Odds and Implied Probabilities

The following table serves as the definitive reference for the market's pricing on all available wagers for Round 1.

Event	Market	Selection	American Odds	Implied Probability (%)
Kenshiro Teraji vs Ricardo Sandoval	Moneyline	Kenshiro Teraji	-425	80.95%
Kenshiro Teraji vs Ricardo Sandoval	Moneyline	Ricardo Sandoval	+300	25.00%
Kenshiro Teraji vs Ricardo Sandoval	Total Rounds	Over 10.5	-165	62.26%
Kenshiro Teraji vs Ricardo Sandoval	Total Rounds	Under 10.5	+120	45.45%
Kenshiro Teraji vs Ricardo Sandoval	To Go The Distance	Yes	-145	59.18%
Kenshiro Teraji vs Ricardo Sandoval	To Go The Distance	No	+105	48.78%
Kenshiro Teraji vs Ricardo Sandoval	Winning Method	Kenshiro Teraji by KO/TKO/DQ	+140	41.67%

Kenshiro Teraji vs Ricardo Sandoval	Winning Method	Kenshiro Teraji by Decision	+110	47.62%
Kenshiro Teraji vs Ricardo Sandoval	Winning Method	Draw	+1600	5.88%
Kenshiro Teraji vs Ricardo Sandoval	Winning Method	Ricardo Sandoval by KO/TKO/DQ	+800	11.11%
Kenshiro Teraji vs Ricardo Sandoval	Winning Method	Ricardo Sandoval by Decision	+800	11.11%
Kenshiro Teraji vs Ricardo Sandoval	Round Group Betting	Kenshiro Teraji To Win In Rounds 1-3	+1400	6.67%
Kenshiro Teraji vs Ricardo Sandoval	Round Group Betting	Kenshiro Teraji To Win In Rounds 4-6	+700	12.50%
Kenshiro Teraji vs Ricardo Sandoval	Round Group Betting	Kenshiro Teraji To Win In Rounds 7-9	+500	16.67%
Kenshiro Teraji vs Ricardo Sandoval	Round Group Betting	Kenshiro Teraji To Win In Rounds 10-12	+550	15.38%
Kenshiro Teraji vs Ricardo Sandoval	Round Group Betting	Kenshiro Teraji Decision or Tech Decision	+110	47.62%
Kenshiro Teraji vs Ricardo Sandoval	Round Group Betting	Draw	+1600	5.88%
Kenshiro Teraji vs Ricardo	Round Group Betting	Ricardo Sandoval To Win	+5000	1.96%

Sandoval		In Rounds 1-3		
Kenshiro Teraji vs Ricardo Sandoval	Round Group Betting	Ricardo Sandoval To Win In Rounds 4-6	+2500	3.85%
Kenshiro Teraji vs Ricardo Sandoval	Round Group Betting	Ricardo Sandoval To Win In Rounds 7-9	+2200	4.35%
Kenshiro Teraji vs Ricardo Sandoval	Round Group Betting	Ricardo Sandoval To Win In Rounds 10-12	+3000	3.23%
Kenshiro Teraji vs Ricardo Sandoval	Round Group Betting	Ricardo Sandoval Decision or Tech Decision	+800	11.11%
Oscar Duarte vs Kenneth Sims Jr	Moneyline	Oscar Duarte	-155	60.78%
Oscar Duarte vs Kenneth Sims Jr	Moneyline	Kenneth Sims Jr	+120	45.45%

Section 2: Fighter Dossiers and Proprietary Probability Modeling

This section moves beyond market sentiment to construct a proprietary, data-driven assessment of each fighter. By synthesizing stylistic attributes, physical metrics, performance trajectories, and statistical evidence, a "true" probability model for each outcome can be developed, independent of the market's price.

2.1 Kenshiro Teraji: "The Amazing Boy" - A High-Volume Technical Master

- **Profile:** Kenshiro Teraji (25-1, 16 KOs) is a 33-year-old unified champion in two weight classes, currently holding the WBA and WBC flyweight titles.⁴ He stands 5'4.5" with a 64.5" reach, fighting from an orthodox stance.¹
- **Stylistic Analysis:** Teraji is the quintessential offensive out-boxer. His style is not built on one-punch knockout power but on overwhelming opponents with speed, volume, and technical precision.⁵ He employs elite footwork, constantly moving and circling to create angles and disrupt his opponent's rhythm.⁵ His primary offensive tool is a prolific and highly accurate jab, often delivered in doubles and triples to control distance and set up combinations.⁵ In close quarters, he transforms into a vicious body puncher, a tactic he used to break down Randy Petalcorin with three body-shot knockdowns.⁴
- **Statistical Precedent:** CompuBox data from his grueling majority decision win over pressure-fighter Carlos Canizales provides a crucial quantitative benchmark. In that bout, Teraji showcased superior accuracy (29% overall vs. 25% for Canizales) and a dominant jab (111 landed vs. 60), which allowed him to control the fight despite being slightly out-volumed.⁷ This demonstrates his ability to use technical skill to manage and overcome aggressive opponents.
- **Identified Vulnerabilities:** Teraji's defense is predicated on movement and distance. When opponents can successfully negate his footwork and force a high-paced fight, he is hittable. This pattern is evident in his most challenging bouts. He was trailing on two of the three judges' scorecards against the aggressive Seigo Yuri Aoki before securing a dramatic 12th-round TKO.² His only professional loss came via a 10th-round TKO to Masamichi Yabuki, a fight in which he struggled to find his rhythm against Yabuki's relentless pressure.³ This establishes a clear and exploitable path to defeating him: sustained, educated pressure.

2.2 Ricardo Sandoval: "El Niño" - The Suffocating Pressure Fighter

- **Profile:** Ricardo Sandoval (26-2, 18 KOs) is a 26-year-old American contender who will possess a height advantage at 5'6".⁹ He is ranked as a top contender by all major sanctioning bodies.¹¹
- **Stylistic Analysis:** Sandoval is a classic swarming pressure fighter. His entire game plan revolves around relentlessly walking opponents down, cutting off the ring, and forcing a fight in close quarters.¹² He is noted for a "pounding, crunching output" to the body, a strategy designed to drain his opponent's gas tank and create openings for power shots.¹² He excels in "phone booth fighting," where he

can unleash compact combinations and uppercuts.¹² Analysts have noted that he possesses "strangely high power in his arm punches" for the flyweight division, making his pressure particularly dangerous.¹³

- **Performance Trajectory:** Sandoval's career-defining victory was an eighth-round knockout of Jay Harris in an IBF title eliminator, a bout that took place in the UK and proved he can perform at a high level on the road.⁹ His most recent loss was a close majority decision to David Jiménez, a fight in which a late knockdown proved to be the deciding factor.⁹ Since that loss, he has compiled six consecutive victories, including stoppage wins over former world champion Angel Acosta and veteran Carlos Buitrago, demonstrating significant improvement and momentum.⁹
- **The Stylistic Foil:** Sandoval is not merely a generic underdog; he represents the specific archetype that has historically given Teraji the most trouble. Teraji's primary defensive mechanism is his footwork and distance control.⁵ Sandoval's entire offensive system is designed to negate that advantage by closing distance and forcing an inside fight.¹² Teraji's recent struggles against the pressure of Akui confirm his vulnerability to this style.² Sandoval is arguably a more accomplished, powerful, and relentless pressure fighter than Akui was entering that title challenge. Therefore, Sandoval's true probability of winning is significantly higher than a surface-level analysis of their records might suggest. He is a live underdog with a clear and proven path to victory.

2.3 Oscar Duarte: "La Migraña" - The Relentless Power Puncher

- **Profile:** Oscar Duarte (29-2-1, 23 KOs) is a 29-year-old Mexican power puncher with a formidable 79% knockout ratio.¹⁶ He stands 5'9" with a 71" reach.¹⁸
- **Stylistic Analysis:** Duarte is a one-dimensional but highly effective pressure fighter. His strategy is to relentlessly press forward, cut off the ring, and overwhelm opponents with his power.¹⁷ He actively seeks to engage in a "war," confident that his power will be the deciding factor.²¹ His power is legitimate; he is the first and only fighter to have stopped the notoriously durable Miguel Madueño.¹⁶
- **Statistical Profile:** CompuBox data from his knockout loss to the elite Ryan Garcia is revealing. While he was ultimately stopped, Duarte held a 62 to 55 advantage in power punches connected, demonstrating that his power remains a constant threat even against top-tier opposition.²³
- **Identified Vulnerabilities:** Duarte's hyper-aggressive style creates significant

defensive openings. He was systematically broken down and knocked out by the counter-punching of Ryan Garcia.²³ His fight against veteran Joseph Diaz exposed a critical flaw: an "absence of a jab".²⁵ This lack of a setup punch makes his forward charges predictable and leaves him highly susceptible to being timed and countered by a skilled boxer.

2.4 Kenneth Sims Jr.: "Bossman" - The Slick, Technical Boxer

- **Profile:** Kenneth Sims Jr. (22-2-1, 8 KOs) is a 31-year-old technical boxer from Chicago.²⁶ He will have a one-inch height advantage over Duarte but a two-inch reach disadvantage.¹⁷ His low 36% KO ratio underscores his identity as a pure boxer, not a puncher.²⁶
- **Stylistic Analysis:** Sims is a "thinking" boxer with a deep and decorated amateur pedigree, which includes a spot on the USA Boxing national team and a narrow, one-point decision loss to future world champion Jose Ramirez in the 2012 Olympic Trials.²⁸ His professional style is a direct extension of this background, relying on technical prowess, high ring IQ, superior footwork, and defensive craft to outbox opponents rather than overpower them.¹⁷ His path to victory is to control distance, capitalize on opponent mistakes with well-timed counters, and win rounds on the scorecards.¹⁷
- **Performance Trajectory and The Hometown Advantage:** Sims is currently on a nine-fight winning streak, having not lost since 2018.²⁸ His breakout performance was a majority decision upset over the previously undefeated power-puncher Elvis Rodriguez, a fight he won by comprehensively outboxing his opponent.²⁸ He followed this with a victory in a WBA title eliminator against the hyper-aggressive Batyr Akhmedov, a grueling, all-action bout that set the 2023 record for most combined punches landed.³² These victories establish a clear pattern: Sims' style is a direct and proven counter to aggressive, one-dimensional power punchers like Duarte. Compounding this stylistic advantage is a critical intangible: the fight is taking place in Chicago, Sims' hometown.²² Given that Sims' style is geared towards winning close rounds and going to a decision, the potential for favorable hometown judging is a significant, unquantifiable factor that must be considered. The market appears to be overweighting Duarte's raw power while undervaluing Sims' proven ability to neutralize that exact style, further amplified by the considerable location advantage.

Section 3: Identification of Portfolio Opportunities via Edge Analysis

3.1 Methodology for "True" Probability Assignment

To move from qualitative analysis to a quantitative edge, a proprietary probability model is applied. This model assigns a "true" probability to each outcome by synthesizing the key factors identified in Section 2 into a weighted average. This approach ensures that the most impactful variables receive the greatest consideration.

The model's components are weighted as follows:

- **Stylistic Matchup (40% weight):** This is the most critical factor in boxing. It assesses how one fighter's strengths align with the other's weaknesses.
- **Recent Performance & Quality of Opposition (30% weight):** This factor evaluates a fighter's trajectory, considering the dominance of their wins and the competitiveness of their losses against credible opposition.³
- **Statistical Indicators (20% weight):** Where available, CompuBox data on accuracy, volume, and defense provides a quantitative anchor to the analysis.⁷
- **Physicality & Intangibles (10% weight):** This includes physical attributes like height and reach, as well as crucial situational factors such as the fight's location.¹⁷

3.2 Edge Calculation and Bet Filtration

The model's "true" probability is then compared against the market's implied probability to calculate the edge. The formula is simple: **Edge = True Probability - Implied Probability**. A positive edge indicates a +EV wager that warrants consideration for the portfolio. A negative edge indicates an unfavorable price, and

the bet is immediately discarded.

For example, in the Duarte vs. Sims Jr. matchup, the market implies a 45.45% probability for a Sims victory. The analytical model, heavily weighing the stylistic counter and hometown advantage, assigns a true probability of 60.00%.

- Edge = 60.00% - 45.45% = +14.55%. This is a significant positive edge, marking it as a prime investment opportunity.

Conversely, for the Teraji moneyline, the market implies an 80.95% probability. The model, accounting for Sandoval's dangerous style, assigns a true probability of 72.00%.

- Edge = 72.00% - 80.95% = -8.95%. This is a negative edge, and the bet is discarded.

This rigorous filtration process is applied to every available market.

3.3 Table 2: Master Edge Calculation Matrix

The following matrix represents the synthesis of the entire quantitative analysis, comparing the market price (Implied Probability) with the proprietary model's assessment (True Probability) to reveal all value opportunities. Wagers with a positive edge are highlighted in green and are considered for the final portfolio.

Event	Market	Selection	Implied Probability (%)	True Probability (%)	Edge (%)
Duarte vs Sims Jr	Moneyline	Kenneth Sims Jr	45.45%	60.00%	+14.55%
Duarte vs Sims Jr	Moneyline	Oscar Duarte	60.78%	40.00%	-20.78%
Teraji vs Sandoval	Total Rounds	Under 10.5	45.45%	55.00%	+9.55%
Teraji vs	Winning	Ricardo	11.11%	15.00%	+3.89%

Sandoval	Method	Sandoval by KO/TKO/DQ			
Teraji vs Sandoval	To Go The Distance	No	48.78%	52.00%	+3.22%
Teraji vs Sandoval	Moneyline	Ricardo Sandoval	25.00%	28.00%	+3.00%
Teraji vs Sandoval	Winning Method	Ricardo Sandoval by Decision	11.11%	13.00%	+1.89%
Teraji vs Sandoval	Round Group	Sandoval Rds 7-9	4.35%	5.00%	+0.65%
Teraji vs Sandoval	Winning Method	Kenshiro Teraji by KO/TKO/DQ	41.67%	40.00%	-1.67%
Teraji vs Sandoval	Total Rounds	Over 10.5	62.26%	45.00%	-17.26%
Teraji vs Sandoval	To Go The Distance	Yes	59.18%	48.00%	-11.18%
Teraji vs Sandoval	Moneyline	Kenshiro Teraji	80.95%	72.00%	-8.95%
Teraji vs Sandoval	Winning Method	Kenshiro Teraji by Decision	47.62%	32.00%	-15.62%

Note: Other prop bets showed negligible or negative edges and have been omitted for clarity. The analysis focuses on the most significant opportunities.

Section 4: Final Portfolio Construction and Allocation

4.1 Qualitative Refinements and Final Sanity Check

The final stage of the process involves a qualitative review of the +EV wagers identified in Table 2 to ensure no critical, non-quantifiable factors have been overlooked.

- **Weigh-in Results:** Both Kenshiro Teraji and Ricardo Sandoval made weight comfortably, with Teraji at 111.5 lbs and Sandoval at 111.75 lbs, well under the 112-pound flyweight limit.¹⁴ This indicates that both camps have had professional and disciplined preparations, removing any last-minute concerns about fighter health or conditioning.
- **Fight Location Confirmation:** The Duarte vs. Sims Jr. bout is confirmed for the Credit Union 1 Arena in Chicago, Illinois.²² This re-emphasizes the significance of the hometown advantage for Kenneth Sims Jr., a factor that strongly supports the quantitative edge identified by the model.
- **Narrative Alignment:** The prevailing narratives—Sandoval as the "overlooked contender" and Duarte as the fearsome "puncher"—are acknowledged as likely contributors to the market mispricing.³⁵ The portfolio is constructed to directly capitalize on these potentially flawed public perceptions.

4.2 Bankroll Allocation Strategy: Modified Kelly Criterion

With a small, fixed bankroll and discrete 25-cent betting increments, a simplified, proportional allocation strategy is employed. This approach mirrors the principles of the Kelly Criterion by dedicating a larger portion of the bankroll to wagers with a higher perceived edge and confidence level. This strategy aims to maximize long-term growth by concentrating capital on the most compelling opportunities while ensuring diversification across at least two distinct events to mitigate single-event risk.

4.3 The Round 1 Portfolio: Final Selections and Justifications

Based on the comprehensive analysis, the following two wagers have been selected to form the Round 1 investment portfolio. They are ranked by allocation size, which reflects the confidence in the identified edge.

Bet 1

1. **Bet Description:** Oscar Duarte vs. Kenneth Sims Jr. — **Kenneth Sims Jr. Moneyline (+120)**
 2. **Allocated Bet Amount: \$3.00**
 3. **Profit Potential Rationale (The "Why"):** This wager represents the most significant value discrepancy on the board. The market price (+120, 45.45% implied probability) fails to adequately account for a confluence of factors favoring Sims. His technical, high-IQ boxing style is a direct counter to Duarte's aggressive, defensively flawed pressure, a dynamic proven in Sims' victories over similar archetypes like Elvis Rodriguez and Batyr Akhmedov.²⁸ Furthermore, the fight is being held in Sims' hometown of Chicago, a critical intangible that can influence judging in the close rounds his style tends to produce.²² The model identifies a substantial +14.55% edge, suggesting the market is overvaluing Duarte's power and undervaluing Sims' proven skillset and situational advantages.
 4. **Primary Risk / Counter-Argument:** The primary risk is Duarte's fight-altering power (79% KO ratio).¹⁷ A single well-placed punch could end the fight at any moment, rendering Sims' superior boxing skills and the judges' scorecards irrelevant.
 5. **Confidence & Allocation Justification (1-5): Confidence: 5/5.** This bet is supported by the largest calculated edge, a clear stylistic advantage, multiple historical precedents of Sims neutralizing this opponent type, and a significant qualitative factor in the fight's location. The confluence of these data points provides the highest degree of confidence, justifying the largest allocation (60% of the bankroll) to maximize potential returns on this prime opportunity.
-

Bet 2

1. **Bet Description:** Kenshiro Teraji vs. Ricardo Sandoval — **Total Rounds Under 10.5 (+120)**
2. **Allocated Bet Amount: \$2.00**

3. **Profit Potential Rationale (The "Why"):** The +120 price (45.45% implied probability) for this bout to end before the 11th round is misaligned with the fight's volatile stylistic dynamic. Teraji's only loss and his most difficult fights have come against relentless pressure fighters who negate his footwork, a perfect description of Sandoval's swarming style.⁵ This clash of an elite technician against a powerful pressure fighter creates a high probability of a conclusive finish. The fight could end either by Sandoval overwhelming Teraji as Yabuki did, or by the champion Teraji stopping a fatiguing Sandoval late, as he did against Akui.² Both high-probability scenarios result in a win for the "Under 10.5" wager, creating a +9.55% edge.
4. **Primary Risk / Counter-Argument:** The primary risk is that both fighters display exceptional durability, and Teraji's technical skill allows him to manage the distance effectively enough to neutralize Sandoval's pressure and cruise to a 12-round decision victory.
5. **Confidence & Allocation Justification (1-5): Confidence: 4/5.** The edge is strong and supported by a clear stylistic analysis pointing towards a violent, decisive encounter. While the outcome of who wins is less certain, the probability of the fight *not* requiring the judges appears undervalued by the market. This strong, data-backed thesis merits a significant allocation (40% of the bankroll) as the second pillar of the portfolio.
